class (IPC 1-7):

Abstract:

Source: JP11032037A2 PROBLEM TO BE SOLVED: To pre-pay access qualification to purchase or rent without imposing any surplus load on a certification data generating device side. SOLUTION: A pre-paid purchase ticket T_2 is stored in an access ticket storing part 13.

Next, (T_1, n_2) is inputted to a certification data-imputting part 14. A use condition judging part 15 extracts a corresponding access ticket (t_2, L_2, n_2) , checks whether or not a use condition L_2 is fulfilled, and reduces frequency information V , when the use condition is fulfilled. A certification data generating and outputting part 16 calculates certification data R by using auxiliary certification decision $(t)_2$ and the use condition L_2 extracted by the use condition decision part 15 and (du) read from a user specific information storing part 11, and outputs T_1 . A user performs access to a program in a purchase state or a rent state by using the T_1 .
